

Lets talk about main features of control panel

1. This is the home screen of 3d settings, here u can customize 3d settings, like texture quality etc..

Secondly here you can dig yourself deeply into the 3d settings, here you can modify everything

the last one is the surround and physx settings, here you can configure your physx settings and surround

2. Display settings:

res settings: under this settings you're allowed to change your res. and change the freq

specify desktop colour settings: This is for desktop colour customizaton, you can adjust the brightness, contrast etc here

rotation of display: you can rotate the screen here by 90 degree 180 degree etc

hdcp: I cant talk about too much about this cuz i dont know what does it for

digital sound settings: here u can change the default audi component

adjust display and size and pos: u can change the aspect rate of the monitor, and etc

3. video settings

set video colour settings: same as the desktop colour settings just for videos

specify video image settings: also the same as dekstop colour settings
